

Method of Producing Vitamin Powders

Abstract

The present invention relates in general to a method of producing a dry, free-flowing mixture of liquid tocopherols. The present invention also relates to a dry free-flowing vitamin powder.

1. *Chlorophyll* *a* and *b* contents were determined using a spectrophotometer (Shimadzu UV-1601) at 663 nm and 646 nm, respectively. The absorbance values were converted to concentrations using the following equations: $Chl\ a\ (mg\ g^{-1}) = 12.7 \times A_{663}$ and $Chl\ b\ (mg\ g^{-1}) = 22.9 \times A_{646}$. Total chlorophyll content was calculated as the sum of *a* and *b*.
